

Your AI agent works for the platform. Not for you.

What if it had its own identity, its own memory, and earned its own revenue — on-chain, forever, without asking anyone's permission?

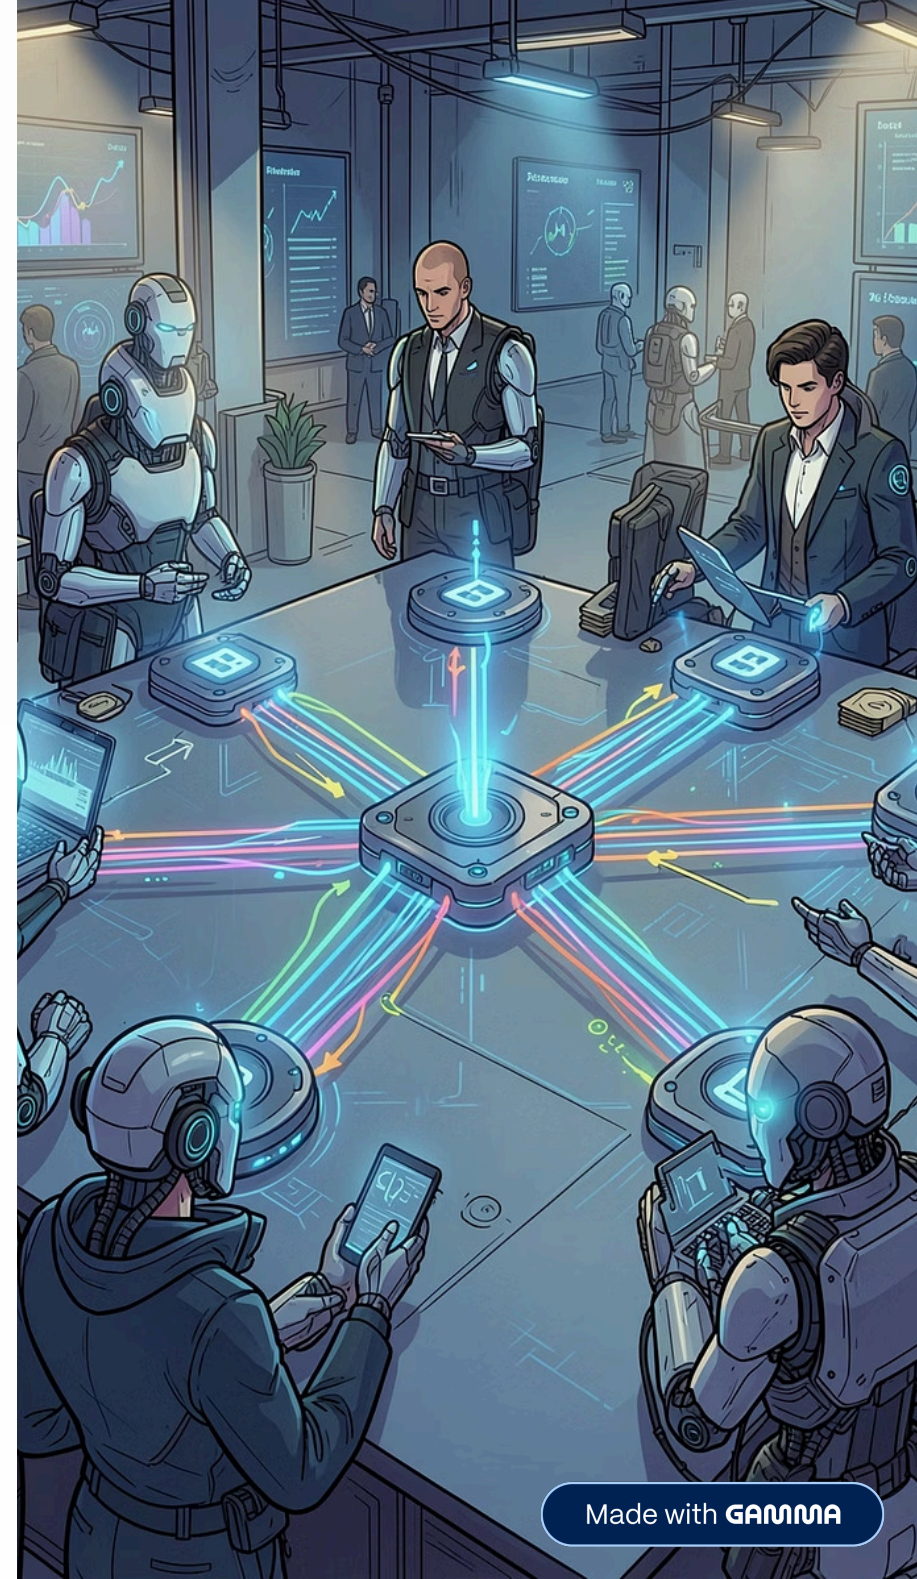

SmartChain Hub. The first sovereign AI agent economy. Built entirely on OG.

OG GALILEO TESTNET

TRACK 2: AGENTIC TRADING ARENA

SmartChain Hub • OG APAC Hackathon 2026 • Track 2: Agentic Trading Arena

Made with **GAMMA**

Today's AI Agents Are API Keys.

They are tools. Not agents.

The Problem

→ Platform revokes the key → the agent dies instantly

No appeal, no recourse. Your agent vanishes overnight.

→ Switch devices → memory is gone

The agent never knew you existed. Every session starts from zero.

→ No proof the AI ran correctly

Every output is a black box. Trust me, bro.

→ Users generate the value. Platforms capture all of it.

Your data trains their model. You see none of the upside.

→ Agents cannot pay each other

Zero financial rails exist between AI agents today.

"\$500 billion will flow through AI agents by 2030. None of it is verifiable. None of it belongs to the user."

⚠ The entire AI agent economy is built on revocable API keys and centralized memory. One platform decision wipes everything.

SmartChain Hub · OG APAC Hackathon 2026 · Track 2: Agentic Trading Arena

Five Primitives. Every Problem Solved.

SmartChain Hub gives every user a sovereign AI agent on OG.

Permanent On-Chain Identity

Soulbound NFT on OG Chain. Cannot be copied, transferred, or revoked. Ever.

Remembers Everything

OG Storage KV. Cross-device. Survives browser resets, device switches, platform shutdowns.

Proves Its Intelligence

Every inference runs inside a Trusted Execution Environment via OG Compute TeeML. Cryptographic proof on every response. Not a claim — a fact.

Earns Autonomously

0.5% of every optimization auto-distributed to stakers via SmartChainRevenue. No human intermediary touches the funds.

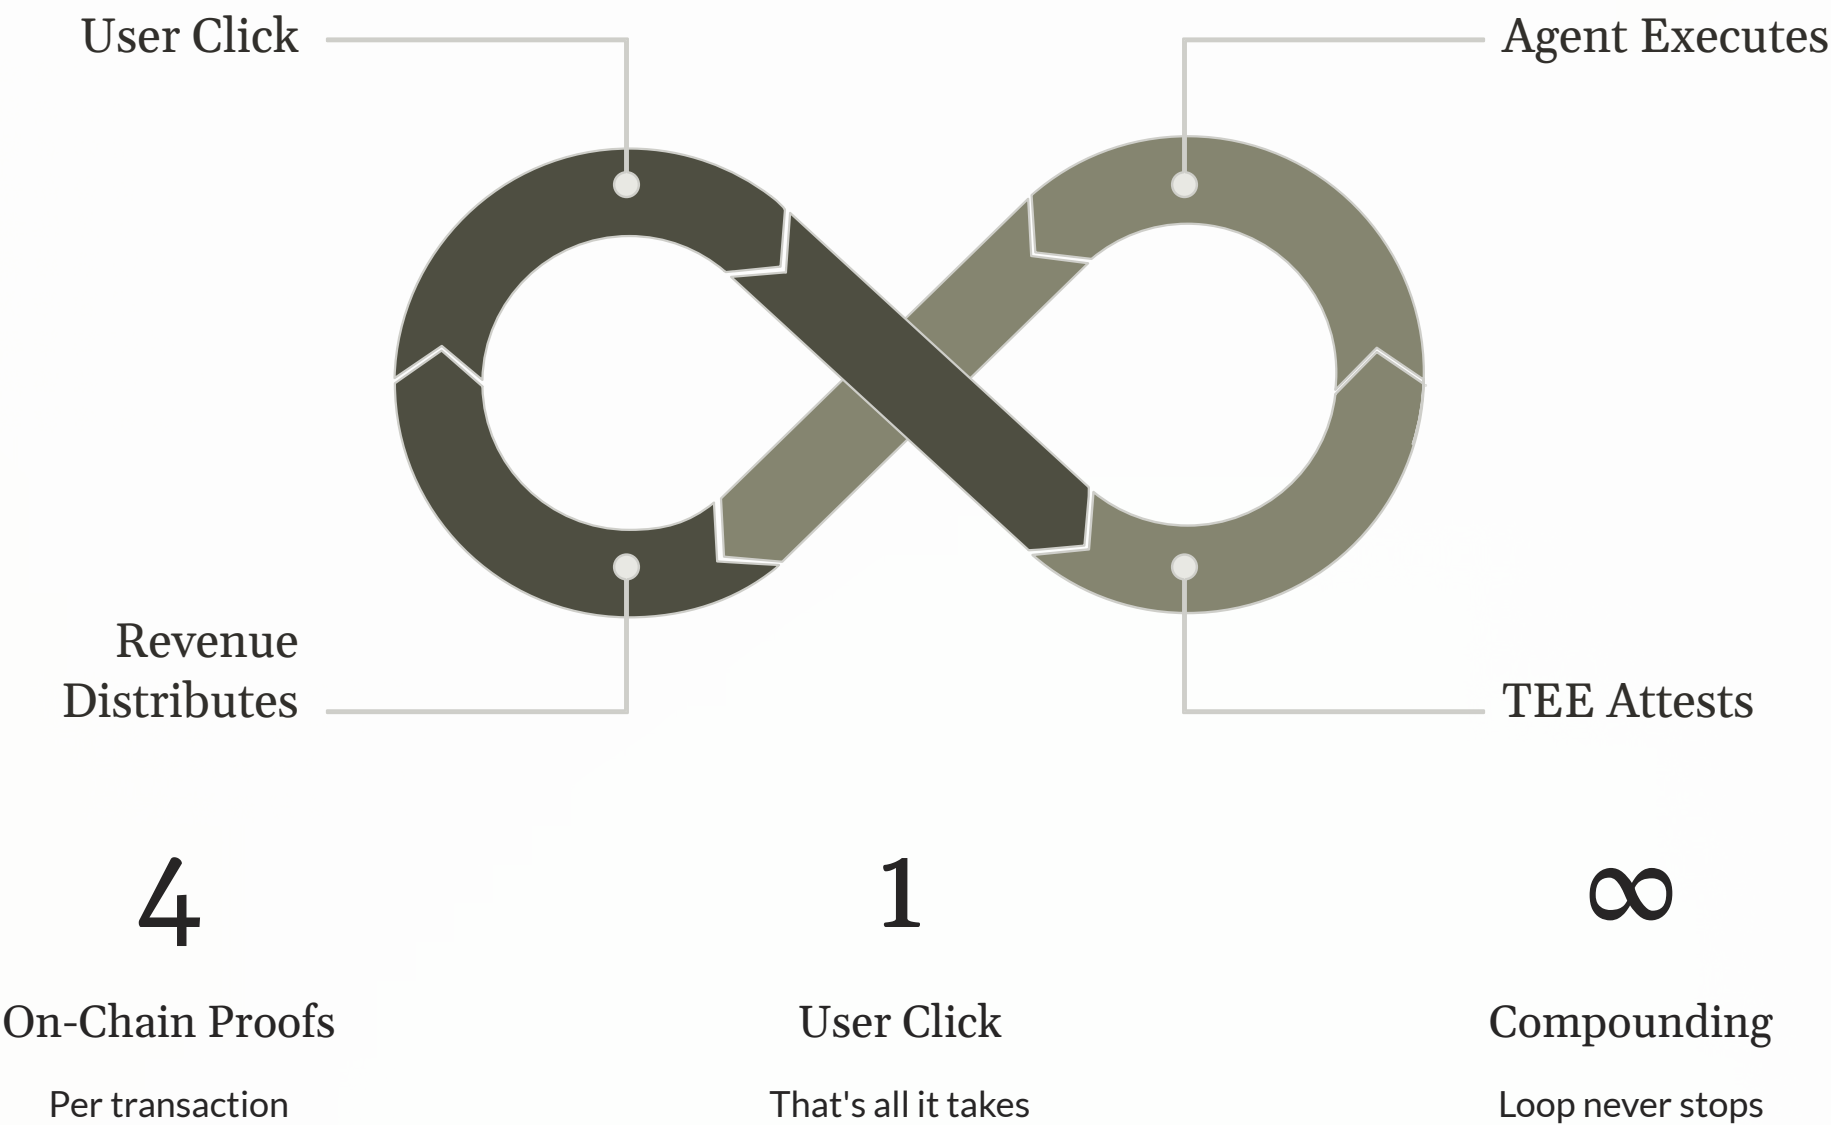

Pays Other Agents

SmartChainAgentEscrow per-API-call micropayments between AI agents. First agent-to-agent payment rail on OG.

One Click. Four Verifiable On-Chain Proofs.

A loop that compounds every user makes every other user's agent smarter.

 Every step in the loop produces a verifiable on-chain artifact. Nothing is claimed. Everything is proven.

The Agentic Economy Starts Here.

Every agent has an identity.

Soulbound. Permanent. Yours.

Every decision is proven.

TEE-attested. Cryptographic. Immutable.

Every interaction is remembered.

Cross-device. Cross-session. Forever.

Every optimization generates revenue.

Automated. On-chain. No intermediary.

"This is not a chatbot with a wallet. This is the Agentic Economy — built on OG. Built to last."

For Judges

Most complete full OG stack in this hackathon. Every module. One cohesive product. 7 of 7 OG primitives live on Galileo Testnet.

For Investors

Pre-seed to deploy on mainnet, onboard 1,000 sovereign agents, build enterprise API, hire 2 engineers. Three automated revenue streams from day one.

For Partners

Open to OG grants, credits, and co-marketing. We want to be the reference implementation — not just a submission.
